

Cohesity Data Security Professional Certification Exam Preparation Guide

Introduction

The Cohesity Data Security Professional certification exam focuses on ensuring individuals are able to successfully use and deploy Cohesity AI-powered data security and management solutions for robust threat protection. The successful exam candidate should be able to identify potential security risks and how to mitigate those risks by deploying both industry-standard knowledge as well as implementing Cohesity best practices and Cohesity security hardening guidelines.

Target Audience

The Cohesity Data Security Professional certification exam is designed for technical roles, such as:

- Professional Services Engineer
- Security Administrator
- Data Protection Administrator
- Data Architect
- Sales Engineer (SEs)
- Storage Administrators
- Network Administrators

Products and Features Covered

Products, solution areas and capabilities covered in this exam include:

- Cohesity Data Cloud
- Cohesity DataProtect
- Cohesity CloudArchive
- Cohesity Replication
- Cohesity SmartFiles
- Cohesity Threat Defense Architecture
- Cohesity Cloud Services

Recommended Training, Knowledge, and Hands-On Experience

- Cohesity Platform Foundations or equivalent knowledge
- Data Protection Operations, Data Protection Implementation or equivalent knowledge
- Cohesity Data Security Administration or equivalent knowledge
- Familiarity with the Cohesity UI
- It is recommended that the candidate have at least six months of hands-on experience with the Cohesity platform and Cohesity DataProtect in a platform or security operator, administrator-level role, security position, or professional services position

Recommended Study Materials

- Cohesity User Guide
- Cohesity Support Portal and Knowledgebase articles
- Cohesity Product Documentation – e.g., Data Cloud, DataProtect, SmartFiles, Hardware Guides, Technical Guides, etc.

Exam Domains/Topics

Section 1 – Network Security (15%)

- Demonstrate knowledge of how to control network protocol access
- Describe Cohesity best practices to secure inflight backup data

Section 2 – System Hardening (22%)

- Describe Write Once, Read Many (WORM) storage technology
- Describe Cohesity encryption capabilities
- Demonstrate knowledge of how to reduce the attack surface
- Demonstrate knowledge of how to secure underlying system access

Section 3 – Security Assessment (13%)

- Describe compliance, legal holds and data retention capabilities
- Describe how Cohesity features can protect against attacks
- Describe Zero Trust platform design
- Describe scenarios where third-party solutions are relevant to a secure Cohesity design

Section 4 – User and Access Management (17%)

- Describe the options available for multi-factor authentication
- Describe how to configure single sign-on (SSO)
- Describe how to configure or manage role-based access control (RBAC)
- Demonstrate knowledge of Active Directory user authentication best practices
- Demonstrate knowledge of how to configure multi-tenancy security
- Demonstrate knowledge of how Quorum groups can restrict privileged actions

Section 5 – Periodic Monitoring, Alerting and Auditing (10%)

- Describe Cohesity audit logging capabilities
- Describe the benefits of using remote syslog servers
- Demonstrate knowledge of how to implement monitoring for ransomware or data breaches
- Describe alert notifications on a Cohesity cluster

Section 6 – Incident Response and Remediation (13%)

- Demonstrate knowledge of how to recover from an incident

Section 7 – Secure Data Management (10%)

- Demonstrate knowledge of data isolation methods

Recommended Preparation

In addition to the recommended training, reference study materials, and hands-on experience, this document includes a practice test to help candidates prepare for the [Cohesity Data Security Professional Certification Exam](#).

Exam Details

Cohesity exams are delivered and proctored remotely through a testing center. No onsite testing is available.

| Certification Track | Cohesity Solutions Professional |
|--------------------------------------|--|
| Credential | Cohesity Certified Data Security Professional |
| Exam Number and Title | COH350 – Cohesity Certified Data Security Professional |
| Prerequisite Exams or Certifications | None |
| Exam Duration | 90 minutes |
| Fee | \$150 (USD) |
| Expiration | 2 year |
| Retake Policy | The exam can be attempted once every 14 days |
| Language | English |
| Age requirement | English |
| Age requirement | None |
| Passing Score | 60% |

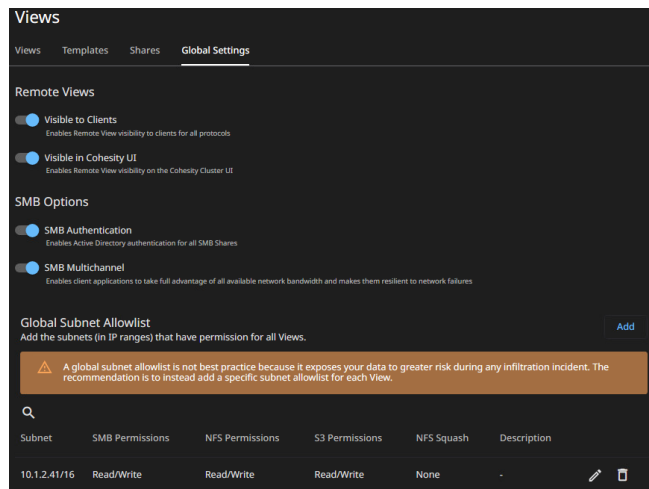

Cohesity Data Security Professional – Practice Exam Questions and Answers

Below are practice questions similar to those found on the certification exam. Please note that these practice exam questions are provided to give candidates a general idea of the type, look, and feel of the questions on the proctored certification exam. Answers to the questions can be found at the bottom of the document.

The list of exam domains/topics and the recommended study materials offer much more detailed information regarding exam content. Performance on these practice questions does not guarantee similar results or passing marks on the actual certification exam(s).

Cohesity Data Security Professional – Practice Exam Questions

Question 1:

Referring to the exhibit, which statement is correct?

- A. Any sessions initiated from 10.1.2.4 can view, modify, and delete a file.
- B. Any sessions initiated from 10.2.2.4 can view, modify, and delete a file.
- C. Any sessions initiated from 10.2.1.4 can only view and modify a file.
- D. Any sessions initiated from 10.1.3.4 can only view a file.

Question 2:

You want to protect more workloads using Cohesity. You need to protect your production SMB NAS share but want to ensure that all transferred data is encrypted first.

In this scenario, what is the configuration option in the UI that should be enabled?

- A. Encryption should be enabled when registering the Source.
- B. Encryption should be enabled at the Protection Group level.
- C. Encryption should be enabled at the Policy level.
- D. Encryption should be enabled at the Storage Domain level.

Question 3:

You are asked to enable DataLock on a Protection Policy but you are unable to toggle on the settings.

Which statement is correct in this scenario?

- A. Your user account is not assigned the admin role.
- B. Your user account is not assigned the data security role.
- C. FIPS 140-2 encryption was not enabled.
- D. The Protection Policy is not being used by a Protection Group.

Question 4:

You are enabling encryption at the Cohesity cluster level at the time of the cluster installation.

In this scenario, which statement is true about data at rest encryption if the cluster has multiple multitenancy organizations?

- A. Each View will have its encryption keys.
- B. All Views will have the same encryption keys.
- C. Each created Storage Domain will have its encryption keys.
- D. All Storage Domains will have the same encryption keys.

Question 5:

You are working with your team to reduce the attack surface to strengthen your organization's security posture.

In this scenario, what are two best practices that should be implemented according to the Cohesity security hardening guidelines? (Choose two.)

- A. Create roles to enforce the least user privileges.
- B. Create multiple users as needed.
- C. Use the admin user to perform all tasks.
- D. Keep the support channel on at all times.

Question 6:

You want to prevent Cohesity cluster credentials from being compromised by a man-in-the-middle attack.

In this scenario, which method would satisfy this requirement?

- A. Ensure that the cluster or storage domain is encrypted.
- B. Enable SMB encryption.
- C. Add a Network Information Services provider.
- D. Replace the default SSL certificate.

Question 7:

You created a custom role for a new Microsoft SQL DBA. You want to ensure that this user only has access to all backup and recovery operations of the Microsoft SQL servers that are registered within Cohesity.

In this scenario, how would you accomplish this task?

- A. The custom role must have Admin Privileges.
- B. The custom role must have Data Security Privileges.
- C. The user account has restricted access to select Microsoft SQL sources.
- D. The user account has restricted access to select internal Microsoft SQL backup Views.

Question 8:

As part of your responsibilities during a recovery scenario, you need to determine how to re-create your existing Protection Groups and policies.

Which two methods would you use to document this information for re-creation at a later date? (Choose two.)

- A. Use the custom reporting database.
- B. Use the REST API.
- C. Use the built-in Cohesity reports.
- D. Share Product Usage Statistics.

Question 9:

You have determined that ransomware has been triggered in the environment, and administrative credentials may have been compromised.

Which two steps should be performed first to help ensure that the Cohesity cluster is protected in this situation? (Choose two.)

- A. Open a case with support.
- B. Enable audit logging.
- C. Change passwords.
- D. Perform an instant mass restore of critical workloads.

Question 10:

You need to ensure that the data you are archiving to an External Target cannot be modified by any cluster user.

Which Policy setting must be configured to accomplish this task?

- E. CloudSpin
- F. DataLock
- G. Extended Retention
- H. Full Backup
