COHESITY | **Microsoft**

Enhanced Data Security and Recovery with Cohesity and Microsoft 365 Backup Storage

Cohesity Data Cloud is a robust, high-performance, AI-powered solution for data backup and recovery that provides a secure environment for safeguarding and protecting data. It offers comprehensive, policy-based protection for cloud-native, SaaS, and traditional data sources. Customers looking for simplicity and ease of deployment can opt for the managed service offering with Cohesity DataProtect delivered as a service.

Nearly 2 billion new files are added to Microsoft 365 every day. Microsoft 365 data is one of the top workloads secured and managed by Cohesity by enterprises worldwide. The seamless integration with Microsoft 365 Backup Storage further enhances the protection of data backup by providing an additional layer of resilience against cyber threats. This integration empowers organizations to swiftly respond to and recover from data loss incidents within Microsoft 365 environments (SharePoint, Microsoft 365 Exchange, and OneDrive). This solution is also available to transact through the Microsoft Azure Marketplace to help organizations offset their Microsoft Azure Consumption Commitment (MACC).

Why enterprise customers trust Cohesity with Microsoft 365 Backup Storage

Secure data protection - Cohesity ensures that Microsoft 365 data remains immutable, accessible, and protected from cyber threats and accidental data loss incidents.

High-speed backup - Organizations can protect the entire tenant within hours of onboarding instead of weeks or months by eliminating throttling issues.

Single pane of glass - Organizations can manage backup and recovery for all on-prem, cloud-native, and SaaS workloads through a unified management interface, making it easier to protect enterprise data at scale.

Rapid Recovery - Recover within hours instead of days or weeks to a prior point-in-time to necessary granular level or at scale while ensuring the data is safe and clean before restoring operations.

APIs for intelligent workflows - Tie together the power of Cohesity's AI-powered platform with non-Microsoft 365 data and intelligent workflows via APIs.

Use cases

Flexible Microsoft 365 data backup - Keep data isolated in a separate tenant with flexible backup schedules.

Secure data protection - Protect against malicious attacks and accidental deletions with immutability and DataLock (WORM).

Long-term retention - Meet backup needs with coverage across Exchange Online, OneDrive, SharePoint Online, Teams, and Groups. Built-in functionality to abide by data residency and data localization needs.
